

Taper-cup Grinding-wheels No.1

Taper-cup Grinding-wheels are used in grind milling cutter, reamer, expanding drill, draw knife, discal lathe-tools, slotting cutter etc. Outer wall angle in 50° could grind the plane with pitch for instance lathe guide-rail, blade adapter etc.

Grinding is one of the major processing in Half-Precision Process and Precision-Process. Grinding-wheels adopted in Plane-grinder, Outer-Rotary grinder and Inner-Rotary grinder as a very important role. It also could be used for blade-grinding.

Grinding-wheels are manufactured into different models and patterns according to specific grindings and grinders. Ordinary Grinding-wheels include: Plain Grinding-wheel, Tubbish Grinding-wheel, Cup Grinding-wheel, Dished Grinding-wheel and Taper-cup Grinding-wheel etc.

The characteristic of Taper-cup wheel No.2 is: It is a line of the binding-point between Basement and Abrasive-workfield. This provides the convenience of grinding in different angles.

We manufacture Diamond/CBN Grinding-wheels and abrasive-materials; Adopt of field of Glass and ceramic grinding; Metallic Grinding-wheels and Resinoid Grinding-wheels used in Glass-processing field; Polishing wheel; Diamond tools used to process magnetic and hard-alloy materials; in addition to irregular Diamond/CBN Grinding-wheels suit to different grinding.
